

GaussFM: Compact Foundation-Feature Gaussian Memory

Frozen RADIO evidence is compressed into a compact 3D memory, then reconstructed features support 2D, 3D, and point queries.

A. Multiview Evidence

posed RGB views + 3DGS geometry

Frame-wise RADIO features
frozen 1280-D dense target

Multiview primitive registration
visibility, contribution, confidence

Training constraints
feature, support, boundary, topology

compress

B. Compact Scene Memory

Compact Foundation-Feature Memory

stored once per scene; reconstruct features on demand

compact code z_i + spatial context $h(x)$
not explicit 1280-D feature storage

training only

C. Open-Vocabulary Queries

LERF rendered-view OVS

dense score map -> 2D mask

LERF direct 3D OVS

primitive scores -> selected mask

ScanNet point query

open-vocabulary points

Frozen-head probes

adaptor-space usability tests

reconstruct

calibrate

query

probe
